**Abstract :** In this paper we obtain a bilinear generating relation for the restricted Jacobi polynomials, using the fractional derivative technique. By the process of confluence, a number of interesting linear, bilinear and bilateral generating relations for the restricted Jacobi and Laguerre polynomials, are derived as special cases. Known generating relations of Khan [7, 8] are also deduced.

**Keywords :** Restricted Jacobi polynomials, Generating relations, Bilinear and Bilateral Generating function, Restricted Laguerre Polynomials.

**AMS Subject Classification:** 33C45, 33C65, 33C70, 33C05, 33C15.

## 1 Introduction and Preliminaries

The fractional derivative operator  $D_z^{(b)}$  is an extension of the familiar derivative operator  $D_z^{(n)}$  ( $n$  being a positive integer), to arbitrary (integer, rational, irrational and complex) values of  $b$ . The development of the fractional derivative operators is receiving keen attention from many researchers presently. In particular, see for example, the work of Lavoie, et al. [9], Manocha [11], Manocha-Sharma [12, 13, 14], Oldham-Spanier [15], Sharma-Abiodun [17] and Deshpande [2]. In 1731, Euler extended the derivative formula in the following form.

Let  $D_z^{(b)}$  denotes the operator of fractional derivative having the arbitrary order  $b$ , as usually defined

$$D_z^{(b)}[z^{a-1}] = \frac{\Gamma(a)}{\Gamma(a-b)} z^{a-b-1}, \quad (1.1)$$

which holds for all values of  $b$ , except  $b = a$  and  $a$  is neither zero nor a negative integer.

Throughout in present paper, we use the following standard notations:

$\mathbb{N} := \{1, 2, 3, \dots\}$ ,  $\mathbb{N}_0 := \{0, 1, 2, 3, \dots\} = \mathbb{N} \cup \{0\}$  and  $\mathbb{Z}^- := \{-1, -2, -3, \dots\} = \mathbb{Z}_0^- \setminus \{0\}$ .

Here, as usual,  $\mathbb{Z}$  denotes the set of integers,  $\mathbb{R}$  denotes the set of real numbers,  $\mathbb{R}^+$  denotes the set of positive real numbers and  $\mathbb{C}$  denotes the set of complex numbers.

The Pochhammer symbol (or the shifted factorial)  $(\lambda)_\nu$  ( $\lambda, \nu \in \mathbb{C}$ ) is defined, in terms of the familiar Gamma

<sup>1</sup>Corresponding author E-Mail: dkabra20@gmail.com (Deepak Kumar Kabra)

function, by

$$(\lambda)_\nu := \frac{\Gamma(\lambda + \nu)}{\Gamma(\lambda)} = \begin{cases} 1 & (\nu = 0; \lambda \in \mathbb{C} \setminus \{0\}) \\ \lambda(\lambda + 1) \dots (\lambda + \nu - 1) & (\nu = n \in \mathbb{N}; \lambda \in \mathbb{C}) \end{cases}$$

it being understood *conventionally* that  $(0)_0 = 1$  and assumed tacitly that the Gamma quotient exists.

The object of the present paper is to establish a generating relation for the product of two restricted Jacobi polynomials, using the fractional derivative operator (1.1). A number of interesting generating formulae for Jacobi and Laguerre polynomials are obtained as special cases.

A unification of Lauricella’s fourteen triple hypergeometric functions  $F_1, F_2, \dots, F_{14}$  and three additional triple hypergeometric functions  $H_A, H_B, H_C$ , was introduced by Srivastava [18], who defined a general triple hypergeometric series  $F^{(3)}[x, y, z]$  in the form

$$F^{(3)} \left[ \begin{matrix} (a) :: (b); (b'); (b'') : (c); (c'); (c''); \\ (e) :: (g); (g'); (g'') : (h); (h'); (h''); \end{matrix} ; x, y, z \right] = \sum_{m,n,p=0}^{\infty} \Lambda(m, n, p) \frac{x^m y^n z^p}{m! n! p!},$$

where, for convenience,

$$\Lambda(m, n, p) = \frac{\prod_{j=1}^A (a_j)_{m+n+p} \prod_{j=1}^B (b_j)_{m+n} \prod_{j=1}^{B'} (b'_j)_{n+p} \prod_{j=1}^{B''} (b''_j)_{p+m} \prod_{j=1}^C (c_j)_m \prod_{j=1}^{C'} (c'_j)_n \prod_{j=1}^{C''} (c''_j)_p}{\prod_{j=1}^E (e_j)_{m+n+p} \prod_{j=1}^G (g_j)_{m+n} \prod_{j=1}^{G'} (g'_j)_{n+p} \prod_{j=1}^{G''} (g''_j)_{p+m} \prod_{j=1}^H (h_j)_m \prod_{j=1}^{H'} (h'_j)_n \prod_{j=1}^{H''} (h''_j)_p}$$

where (a) abbreviates the array of A parameters given by  $a_1, a_2, \dots, a_A$  with similar interpretations for (b), (b'), (b''), et cetera. The above triple hypergeometric series converges absolutely when

$$\begin{cases} 1 + E + G + G'' + H - A - B - B'' - C \geq o, \\ 1 + E + G + G' + H' - A - B - B' - C' \geq o, \\ 1 + E + G' + G'' + H'' - A - B' - B'' - C'' \geq o, \end{cases}$$

where the equalities hold true for suitably constrained values of  $|x|, |y|$  and  $|z|$ .

The Jacobi’s polynomials  $P_n^{(\alpha, \beta)}(x)$  [16] are given by

$$P_n^{(\alpha, \beta)}(x) = \frac{(1 + \alpha)_n}{n!} {}_2F_1 \left[ \begin{matrix} -n, 1 + \alpha + \beta + n; \\ 1 + \alpha \end{matrix} ; \frac{1 - x}{2} \right] \tag{1.2}$$

$$= (-1)^n P_n^{(\beta, \alpha)}(-x)$$

where  $Re(\alpha) > -1$  and  $Re(\beta) > -1$ .

The Laguerre’s polynomials  $L_n^{(\alpha)}(x)$  [16] are given by

$$\lim_{|\beta| \rightarrow \infty} P_n^{(\alpha, \beta)} \left( 1 - \frac{2x}{\beta} \right) = L_n^{(\alpha)}(x) = \frac{(1 + \alpha)_n}{n!} {}_1F_1 \left[ \begin{matrix} -n ; \\ 1 + \alpha; \end{matrix} x \right] \tag{1.3}$$

where  $Re(\alpha) > -1$

The Appell’s double hypergeometric function of first kind  $F_1$  [4] is given by

$$F_1(a; b, b'; c; x, y) = \sum_{r,s=0}^{\infty} \frac{(a)_{r+s} (b)_r (b')_s}{(c)_{r+s}} \frac{x^r y^s}{r! s!} \tag{1.4}$$

where  $\max\{|x|, |y|\} < 1$ .

The Humbert’s double hypergeometric functions are defined by [4]

$$\Phi_1[a, b; c; x, y] = \sum_{r,s=0}^{\infty} \frac{(a)_{r+s} (b)_r}{(c)_{r+s}} \frac{x^r y^s}{r! s!} \tag{1.5}$$

where  $|x| < 1, \quad |y| < \infty$

$$\Phi_2[b, c; d; x, y] = \sum_{r,s=0}^{\infty} \frac{(b)_r (c)_s}{(d)_{r+s}} \frac{x^r y^s}{r! s!} \tag{1.6}$$

where  $|x| < \infty, \quad |y| < \infty$

$$\Phi_3[b; d; x, y] = \sum_{r,s=0}^{\infty} \frac{(b)_r}{(d)_{r+s}} \frac{x^r y^s}{r! s!} \tag{1.7}$$

where  $|x| < \infty, \quad |y| < \infty$ .

The triple hypergeometric function  ${}_3\Phi_D^{(1)}$  of Jain [6] is the generalization of Humbert's double hypergeometric function  $\Phi_1$  and is defined by

$${}_3\Phi_D^{(1)}[a, b, c; d; x, y, z] = \sum_{r,s,k=0}^{\infty} \frac{(a)_{r+s+k} (b)_r (c)_s}{(d)_{r+s+k}} \frac{x^r y^s z^k}{r! s! k!} \tag{1.8}$$

Other notations of  ${}_3\Phi_D^{(1)}$  are  $\Phi_D^{(3)}$  of Srivastava and Exton [19, 4] and  $F_{D_1}$  of Exton [3].

$$\Phi_D^{(3)}[a, b, c, -; d; x, y, z] = \sum_{r,s,k=0}^{\infty} \frac{(a)_{r+s+k} (b)_r (c)_s}{(d)_{r+s+k}} \frac{x^r y^s z^k}{r! s! k!} \tag{1.9}$$

$$F_{D_1}[a, a, a; b, c, -; d, d, d; x, y, z] = \sum_{r,s,k=0}^{\infty} \frac{(a)_{r+s+k} (b)_r (c)_s}{(d)_{r+s+k}} \frac{x^r y^s z^k}{r! s! k!} \tag{1.10}$$

The triple hypergeometric function  $\Phi_3^{(3)}$  of Exton [4] is the generalization of Humbert's double hypergeometric functions  $\Phi_2$  and  $\Phi_3$  and is defined by

$$\Phi_3^{(3)}[a, b; c; x, y, z] = \sum_{r,s,k=0}^{\infty} \frac{(a)_r (b)_s}{(c)_{r+s+k}} \frac{x^r y^s z^k}{r! s! k!} \tag{1.11}$$

Any values of parameters and variables leading to the results given in sections 2 and 3 which do not make sense, are tacitly excluded.

## 2 Main Generating Relations

Consider the generating relation of Feldheim [5] in the form

$$\sum_{n=0}^{\infty} \frac{1}{(1+c)_n} P_n^{(c, a-n)}(x) t^n = \exp\left\{\frac{(1+x)t}{2}\right\} {}_1F_1\left[\begin{matrix} -a; & (1-x)t \\ 1+c; & 2 \end{matrix}\right] \tag{2.1}$$

where  $P_n^{(c, a-n)}(x)$  and  ${}_1F_1$  are restricted Jacobi's polynomials and Kummer's confluent hypergeometric function [16], respectively.

In equation (2.1), replacing  $t$  by  $bt$ , multiplying both the sides by  $(1-by)^m b^{d-1}$ , ( $m$  being a positive integer), using the operator  $D_b^{(d-e)}$  on both the sides and interpreting the result with the help of the definition (1.1), we get the bilateral generating relation in the form

$$\begin{aligned} & \sum_{n=0}^{\infty} \frac{(d)_n P_n^{(c, a-n)}(x)}{(e)_n (1+c)_n} {}_2F_1\left[\begin{matrix} -m, d+n; & \\ e+n & ; & by \end{matrix}\right] (bt)^n \\ &= F^{(3)}\left[\begin{matrix} d :: -; -; - : -; -a & ; -m; & \frac{b(1+x)t}{2}, \frac{b(1-x)t}{2}, by \\ e :: -; -; - : -; 1+c & ; -; & \end{matrix}\right] \end{aligned} \tag{2.2}$$

where  ${}_2F_1$  and  $F^{(3)}$  are Gauss's ordinary hypergeometric polynomial [16] and Srivastava's triple hypergeometric function respectively.

In (2.2), replacing  $y, d, e$  and  $b$  by  $\frac{1-y}{2}, 1+d+e+m, 1+e$  and  $1$ , respectively and using the definition (1.2) of Jacobi's polynomial, we get a bilinear generating relation for Jacobi's polynomials in the following form

$$\sum_{n=0}^{\infty} \frac{m!(1+d+e+m)_n P_n^{(c,a-n)}(x) P_m^{(e+n,d)}(y)}{(1+e)_{m+n} (1+c)_n} t^n = F^{(3)} \left[ \begin{matrix} 1+d+e+m :: -; -; -; -; -a & ; -m; & \frac{(1+x)t}{2}, \frac{(1-x)t}{2}, \frac{1-y}{2} \\ 1+e & :: -; -; -; -; 1+c; & -; \end{matrix} \right] \quad (2.3)$$

### 3 Special Cases

In (2.2) setting  $b = 1$ , replacing  $x$  and  $t$  by  $\left(\frac{2x}{c} - 1\right)$  and  $-(1+c)t$ , respectively, taking  $|c| \rightarrow \infty$ , using the confluence principle [10, 1, 19], we get

$$\sum_{n=0}^{\infty} \frac{(d)_n L_n^{(a-n)}(x)}{(e)_n} {}_2F_1 \left[ \begin{matrix} -m, d+n; \\ e+n; \end{matrix} y \right] t^n = {}_3\Phi_D^{(1)} [d, -a, -m; e; -t, y, -xt] \quad (3.1)$$

$$= \Phi_D^{(3)} [d; -a, -m, -; e; -t, y, -xt] \quad (3.2)$$

$$= F_{D_1} [d, d, d; -a, -m, -; e, e, e; -t, y, -xt] \quad (3.3)$$

Here  $L_n^{(a-n)}(x)$  are the restricted Laguerre's polynomials (1.3).

In (3.1) or (3.2) or (3.3), replacing  $e, t$  and  $y$  by  $1+e, \frac{t}{d}$  and  $\frac{y}{d}$ , respectively and taking  $|d| \rightarrow \infty$ , we get a bilinear generating function for restricted Laguerre's polynomials

$$\sum_{n=0}^{\infty} \frac{m! L_n^{(a-n)}(x) L_m^{(e+n)}(y)}{(1+e)_{m+n}} t^n = \Phi_3^{(3)} [-a, -m; 1+e; -t, y, -xt] \quad (3.4)$$

Setting  $t = -y$  in (3.3) and using a transformation of Exton [3], we get

$$\sum_{n=0}^{\infty} \frac{(d)_n L_n^{(a-n)}(x)}{(e)_n} {}_2F_1 \left[ \begin{matrix} -m, d+n; \\ e+n; \end{matrix} y \right] (-y)^n = \Phi_1 [d; -(a+m); e; y, xy] \quad (3.5)$$

Replacing  $y$  by  $-y$  and taking  $m = 0$ , (3.5) reduces to a known generating function of Khan [8]

$$\sum_{n=0}^{\infty} \frac{(d)_n L_n^{(a-n)}(x)}{(e)_n} y^n = \Phi_1 [d; -a; e; -y, -xy] \quad (3.6)$$

When  $y$  is replaced by  $\frac{y}{d}$ , taking  $|d| \rightarrow \infty$ , (3.6) reduces to another known generating function of Khan [7]

$$\sum_{n=0}^{\infty} \frac{L_n^{(a-n)}(x)}{(e)_n} y^n = \Phi_3 [-a; e; -y, -xy] \quad (3.7)$$

When  $y = 0$  or  $m = 0$ , (3.3) reduces to (3.6).

When  $x = 0$ , (3.3) reduces to

$$\sum_{n=0}^{\infty} \frac{(a)_n (d)_n}{(e)_n} {}_2F_1 \left[ \begin{matrix} -m, d+n; \\ e+n; \end{matrix} y \right] \frac{t^n}{n!} = F_1 [d; a; -m; e; t, y] \quad (3.8)$$

Replacing  $t$  by  $\frac{t}{a}$  in (3.8) and taking  $|a| \rightarrow \infty$ , we get

$$\sum_{n=0}^{\infty} \frac{(d)_n}{(e)_n} {}_2F_1 \left[ \begin{matrix} -m, d+n; \\ e+n; \end{matrix} y \right] \frac{t^n}{n!} = \Phi_1 [d; -m; e; y, t] \quad (3.9)$$

On replacing  $y, t$  and  $e$  by  $\frac{y}{d}, \frac{t}{d}$  and  $1 + e$ , respectively and taking  $|d| \rightarrow \infty$ , (3.8) reduces to

$$\sum_{n=0}^{\infty} \frac{m!(a)_n}{(1+e)_{m+n}} L_m^{(e+n)}(y) \frac{t^n}{n!} = \Phi_2 [a, -m; 1+e; t, y] \tag{3.10}$$

Similarly by the process of confluence, (3.10) gives

$$\sum_{n=0}^{\infty} \frac{m!}{(1+e)_{m+n}} L_m^{(e+n)}(y) \frac{t^n}{n!} = \Phi_3 [-m; 1+e; y, t] \tag{3.11}$$

When  $y = 0$  or  $m = 0$  in (3.4), we again get (3.7) and when  $x = 0$ , (3.4) reduces to (3.10). Alternatively (3.1), (3.8) and (3.9) can also be written in the following bilateral and linear generating relations

$$\begin{aligned} & \sum_{n=0}^{\infty} \frac{(1+e+d+m)_n}{(1+e+m)_n} L_n^{(a-n)}(x) P_m^{(e+n,d)}(y) t^n \\ &= \frac{(1+e)_m}{m!} {}_3\Phi_D^{(1)} \left[ 1+e+d+m, -a, -m; 1+e; -t, \frac{1-y}{2}, -xt \right] \end{aligned} \tag{3.12}$$

$$\sum_{n=0}^{\infty} \frac{(a)_n (1+e+d+m)_n}{(1+e+m)_n} P_m^{(e+n,d)}(y) \frac{t^n}{n!} = \frac{(1+e)_m}{m!} F_1 \left[ 1+e+d+m, a, -m; 1+e; t, \frac{1-y}{2} \right] \tag{3.13}$$

and

$$\sum_{n=0}^{\infty} \frac{(1+e+d+m)_n}{(1+e+m)_n} P_m^{(e+n,d)}(y) \frac{t^n}{n!} = \frac{(1+e)_m}{m!} \Phi_1 \left[ 1+e+d+m; -m; 1+e; \frac{1-y}{2}, t \right] \tag{3.14}$$

### Acknowledgment

Authors are indebted to Prof. M. A. Pathan, Aligarh Muslim University, Aligarh, U.P. (India) for the valuable discussions during the preparation of this paper.
