#### Abstract

Each prime number fits in one of six unique forms $7 n+k$. Each form $7 n+k$, for $1 \leq k \leq 6$ forms an arithmetical progression; each containing, as assured by Dirichlet's Theorem, infinite number of primes. This work analyzes occurrences of primes in all of these arithmetical progressions from different angles, both 10 power blockwise as well as absolutely in ranges going as high as $1,000,000,000,000$.

## 1. Introduction

As is well known, a prime number is a positive integer greater than 1 having only two positive integral divisors, viz., 1 and itself. They happen to be infinite in number [1].

## 2. Primes Distributions

Irregularity in the distribution of prime numbers amongst the natural numbers is very clear by their often-quoted two properties: On one side it is strongly conjectured that there are infinitely many twin primes, those successive prime pairs which are very much close, accommodating only one composite number inbetween and on the other side, the proved fact that there are successive primes with as high gaps between them as desired.

One parameter of measurement of prime distribution is the number of primes less than or equal to $x$. It is denoted by $\pi(x)$.

## 3. Primes Distributions in Arithmetical Progressions

An arithmetical progression is integer sequence of form $a n+b$, with $a$ and $b$ fixed integers and $n$ varying over all non-negative integers. If we take $a$ as a positive integer and let $b$ take values from 0 to $a-1$, then the $a$ number of arithmetical progressions $a n+k$, with $0 \leq k<a$ generate and every integer fits in one and only one of them.

For any fixed $a$, every prime number also occurs in some or other arithmetical progression $a n+b$; wherein we are interested in how many of them will be in each such progression. As there are infinitely many primes, for every fixed positive integer

[^0]$a$, at least one of the progressions can contain infinitely many primes. Dirichlet [2] elegantly proved that every arithmetical progression $a n+b$ satisfying the condition $\operatorname{gcd}(a, b)=1$ contains infinitely many primes.
Already in [4], [5], [6], and [7], the symbol $\pi_{a, b}(x)$ is introduced to represent the number of primes in an arithmetical progression $a n+b$ that are less than or equal to $x$.

## 4. Primes Distributions in Arithmetical Progressions $7 n+k$

After dividing any positive integer by a positive integer $m$, the process of integer division gives one of the integers $0,1,2, \cdots, m-1$ as remainders. Taking $m=7$ gives remainders in the process of division by 7 to be $0,1,2,3,4,5$ and 6. As each positive integer after dividing by 7 yields one and only one amongst these values as remainder, each integer must be of either of the forms $7 n+0=7 n$ or $7 n+1$ or $7 n+2$ or $7 n+3$ or $7 n+4$ or $7 n+5$ or $7 n+6$, which are arithmetical progressions under consideration here.

First few numbers of the form $7 n$ are

$$
7,14,21,28,35,42,49,56,63,70,77, \cdots
$$

Each one of them is perfectly divisible by 7. Except the first member, viz., 7, none of these is prime. This sequence contains only one prime 7 with all its other members being composite numbers. $7 n$ when seen as arithmetical progression $7 n+0$, with $\operatorname{gcd}(7,0)=7>1$, is not a candidate for occurrence of any more primes by Dirichlet's Theorem also.

First few numbers of the form $7 n+1$ are

$$
1,8,15,22,29,36,43,50,57,64,71,78, \cdots
$$

This contains infinitely many primes as $g c d(7,1)$ is 1 as per requirement of Dirichlet's Theorem.
First few numbers of the form $7 n+2$ are

$$
2,9,16,23,30,37,44,51,58,65,72,79, \cdots
$$

This sequence also contains infinitely many primes as $\operatorname{gcd}(7,2)$ is 1 as per requirement of Dirichlet's Theorem. First few numbers of the form $7 n+3$ are

$$
3,10,17,24,31,38,45,52,59,66,73,80, \cdots
$$

This one also has infinitely many primes in it as $\operatorname{gcd}(7,3)$ is 1 as per need of Dirichlet's Theorem.
First few numbers of the form $7 n+4$ are

$$
4,11,18,25,32,39,46,53,60,67,74,81, \cdots
$$

This sequence also does contain infinitely many primes as $\operatorname{gcd}(7,4)$ is 1 as required by Dirichlet's Theorem. First few numbers of the form $7 n+5$ are

$$
5,12,19,26,33,40,47,54,61,68,75,82, \cdots
$$

This one also does contain infinitely many primes as $\operatorname{gcd}(7,5)$ is 1 as demanded by Dirichlet's Theorem. First few numbers of the form $7 n+6$ are

$$
6,13,20,27,34,41,48,55,62,69,76,83, \cdots
$$

This progression also contains infinitely many primes as $\operatorname{gcd}(7,6)$ is 1 as necessitated by Dirichlet's Theorem.
Like for some arithmetical progressions given in [8], independent proofs about infinitude of primes in each of these arithmetical progressions can separately be provided.

We present here a comparative analysis of the prime numbers contained in arithmetical progressions $7 n+1,7 n+2,7 n+3$, $7 n+4,7 n+5$ and $7 n+6$.

## 5. Prime Number Race

For any fixed positive integer $a$ and all integers $b, 0 \leq b<a$, all the arithmetical progressions $a n+b$ which contain infinitely many primes are compared to decide which one amongst them contains more number of primes. This is term well-known as prime number race [9].

Here we have compared dominance of the number of primes of form $7 n+1,7 n+2,7 n+3,7 n+4,7 n+5$ and $7 n+6$ till one trillion, i.e., $1,000,000,000,000\left(10^{12}\right)$. The huge prime database could be made available in minimum time by use of best of the algorithms obtained by exhaustive comparisons in [10], [11], [12], [13], [14], [15] with betterment estimates in [16]. Java Programming Language [17], was chosen to implement these best algorithms on electronic computers to analyze big range of primes thoroughly.

Table 1: Number of Primes of form $7 n+k$ in First Blocks of 10 Powers.

| Sr. No. | Range $1-x(1$ to $x)$ | Number of Primes of Form |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  |  | $\begin{gathered} 7 n+1 \\ \left(\pi_{7,1}(x)\right) \\ \hline \end{gathered}$ | $\begin{gathered} \hline 7 n+2 \\ \left(\pi_{7,2}(x)\right) \\ \hline \end{gathered}$ | $\begin{gathered} \hline 7 n+3 \\ \left(\pi_{7,3}(x)\right) \\ \hline \end{gathered}$ | $\begin{gathered} 7 n+4 \\ \left(\pi_{7,4}(x)\right) \\ \hline \end{gathered}$ | $\begin{gathered} 7 n+5 \\ \left(\pi_{7,5}(x)\right) \\ \hline \end{gathered}$ | $\begin{gathered} \hline 7 n+6 \\ \left(\pi_{7,6}(x)\right) \\ \hline \end{gathered}$ |
| 1 | 1-10 | 0 | 1 | 1 | 0 | 1 | 0 |
| 2 | 1-100 | 3 | 4 | 5 | 3 | 5 | 4 |
| 3 | 1-1,000 | 28 | 27 | 30 | 26 | 29 | 27 |
| 4 | 1-10,000 | 203 | 203 | 209 | 202 | 211 | 200 |
| 5 | 1-100,000 | 1,593 | 1,584 | 1,613 | 1,601 | 1,604 | 1,596 |
| 6 | 1-1,000,000 | 13,063 | 13,065 | 13,105 | 13,069 | 13,105 | 13,090 |
| 7 | 1-10,000,000 | 110,653 | 110,771 | 110,815 | 110,776 | 110,787 | 110,776 |
| 8 | 1-100,000,000 | 960,023 | 960,114 | 960,213 | 960,085 | 960,379 | 960,640 |
| 9 | 1-1,000,000,000 | 8,474,221 | 8,474,796 | 8,475,123 | 8,474,021 | 8,474,630 | 8,474,742 |
| 10 | 1-10,000,000,000 | 75,840,762 | 75,841,428 | 75,843,438 | 75,841,922 | 75,842,174 | 75,842,786 |
| 11 | 1-100,000,000,000 | 686,339,040 | 686,342,043 | 686,338,138 | 686,340,737 | 686,346,250 | 686,348,604 |
| 12 | 1-1,000,000,000,000 | 6,267,973,536 | 6,267,979,692 | 6,267,994,788 | 6,267,984,796 | 6,267,992,446 | 6,267,986,759 |

Since all primes, except 7, are of only of one of these forms, their quantity seems quite averagely distributed. The deviation from respective averages is plotted ahead.

Figure 1: Deviation of $\pi_{7, k}(x)$ from Average

The number of primes of the form $7 n+5$ is seen always above the average; while $7 n+1$ is below the average up to $10^{12}$ in almost all discrete blocks of 10 powers. This trend might have changed in between and is a subject matter of future explorations.

## 6. Block-wise Distribution of Primes

Lack of the formula for all primes together with their infinitude makes them mysterious. We continue with the plain approach of considering all primes up to limit of one trillion $\left(10^{12}\right)$ and dividing this complete number range under consideration in blocks of powers of 10 each :

$$
\begin{gathered}
1-10,11-20,21-30,31-40, \cdots \\
1-100,101-200,201-300,301-400, \cdots \\
1-1000,1001-2000,2001-3000,3001-4000, \cdots
\end{gathered}
$$

A detail analysis is performed on various fronts and owing to our range limit of $10^{12}$, there are $10^{12-i}$ number of blocks of $10^{i}$ size for each $1 \leq i \leq 12$.

### 6.1. The First and the Last Primes in the First Blocks of 10 Powers

The search of the first and the last prime number in every first block of each 10 power till $10^{12}$ is performed. Once available, the first prime of first power of 10 continues for all higher sized blocks.

Table 2: First Primes of form $7 n+k$ in First Blocks of 10 Powers

| Sr. No. | Blocks of Size |  |  |  |  |  |  |
| :---: | ---: | ---: | ---: | ---: | ---: | ---: | :---: |
|  |  | Form $7 n+1$ | Form $7 n+2$ | Form $7 n+3$ | Form $7 n+4$ | Form $7 n+5$ |  |
| Form $7 n+6$ |  |  |  |  |  |  |  |
| 1 |  | Not Found | 2 | 3 | Not Found | 5 |  |
| 2 |  | 29 | 2 | 3 | 11 | 5 |  |

The largest prime numbers of various forms in first blocks of 10 powers are as follows.

Table 3: Last Primes of form $7 n+k$ in First Blocks of 10 Powers

| Sr. No. | Blocks of Size | Last Prime in the First Block |  |  |  |  |  |
| :---: | ---: | ---: | ---: | ---: | ---: | ---: | ---: |
|  |  | Form $7 n+1$ | Form $7 n+2$ | Form $7 n+3$ | Form $7 n+4$ | Form $7 n+5$ | Form $7 n+6$ |
| 1 | 10 | Not Found | 2 | 3 | Not Found | 5 | Not Found |
| 2 | 100 | 71 | 99 | 73 | 67 | 99 |  |
| 3 | 1,000 | 967 | 947 | 997 | 97 |  |  |
| 4 | 10,000 | 9,941 | 9,949 | 9,929 | 9,923 | 9,973 | 9,967 |
| 5 | 100,000 | 99,989 | 99,871 | 99,991 | 99,971 | 99,923 | 99,833 |
| 6 | $1,000,000$ | 999,979 | 999,959 | 999,953 | 999,961 | 999,983 | 999,907 |
| 7 | $10,000,000$ | $9,999,991$ | $9,999,971$ | $9,999,937$ | $9,999,973$ | $9,999,883$ | $9,999,877$ |
| 8 | $100,000,000$ | $99,999,971$ | $99,999,839$ | $99,999,959$ | $99,999,827$ | $99,999,989$ | $99,999,941$ |
| 9 | $1,000,000,000$ | $999,999,883$ | $999,999,751$ | $999,999,353$ | $999,999,893$ | $999,999,929$ | $999,999,937$ |
| 10 | $10,000,000,000$ | $9,999,999,787$ | $9,999,999,851$ | $9,999,999,943$ | $9,999,999,881$ | $9,999,999,833$ | $9,999,999,967$ |
| 11 | $100,000,000,000$ | $99,999,999,947$ | $99,999,999,871$ | $99,999,999,977$ | $99,999,999,943$ | $99,999,999,769$ | $99,999,999,833$ |
| 12 | $1,000,000,000,000$ | $999,999,999,937$ | $999,999,999,959$ | $999,999,999,673$ | $999,999,999,989$ | $999,999,999,899$ | $999,999,999,767$ |

Once found, the first primes for specific forms in all the first blocks continue to be same for higher sizes. The deviation of the last primes of these forms in the first blocks has following trend.

Figure 2: First \& Last Primes of form $7 n+k$ in First Blocks of 10 Powers.

### 6.2. Minimum Number of Primes in Blocks of 10 Powers

For all blocks of each first 10 power ranging from $10^{1}$ to $10^{12}$, the minimum number of primes of each form coming in each such block has been determined and the block-wise deviation of minimum number of primes of different forms found there from respective averages is as it appears in the figure ahead.

Table 4: Minimum Number of Primes of form $7 n+k$ in Blocks of 10 Powers

| Sr. No. | Blocks of Size | Minimum Number of Primes in Blocks |  |  |  |  |  |
| :---: | ---: | ---: | ---: | ---: | ---: | ---: | ---: |
|  |  | Form $7 n+1$ | Form $7 n+2$ | Form $7 n+3$ | Form $7 n+4$ | Form $7 n+5$ | Form $7 n+6$ |

| 5 | 100,000 | $846,428,800,000$ | $944,598,200,000$ | $866,675,100,000$ | $936,768,900,000$ | $942,228,800,000$ | $975,758,200,000$ |
| 6 | $1,000,000$ | $999,652,000,000$ | $992,313,000,000$ | $993,219,000,000$ | $906,367,000,000$ | $965,097,000,000$ | $926,912,000,000$ |
| 7 | $10,000,000$ | $975,060,000,000$ | $998,020,000,000$ | $970,760,000,000$ | $987,710,000,000$ | $999,270,000,000$ | $997,370,000,000$ |
| 8 | $100,000,000$ | $999,000,000,000$ | $980,600,000,000$ | $996,400,000,000$ | $975,100,000,000$ | $971,600,000,000$ | $997,300,000,000$ |
| 9 | $1,000,000,000$ | $997,000,000,000$ | $998,000,000,000$ | $990,000,000,000$ | $999,000,000,000$ | $995,000,000,000$ | $997,000,000,000$ |
| 10 | $10,000,000,000$ | $990,000,000,000$ | $990,000,000,000$ | $990,000,000,000$ | $990,000,000,000$ | $990,000,000,000$ | $990,000,000,000$ |
| 11 | $100,000,000,000$ | $900,000,000,000$ | $900,000,000,000$ | $900,000,000,000$ | $900,000,000,000$ | $900,000,000,000$ | $900,000,000,000$ |

The comparative trend deserves graphical representation.

Figure 4: First \& Last Blocks of 10 Powers with Minimum Number of Primes of form $7 n+k$.

The determination of frequency of blocks of minimum occurrences of primes of $7 n+k$ forms is now due.

Table 7: Frequency of Minimum Number of Primes of form $7 n+k$ in Blocks of 10 Powers

| Sr. No. | Blocks of Size. of Times Minimum No. of Primes Occurring in Blocks |  |  |  |  |  |  |
| :---: | ---: | ---: | ---: | ---: | ---: | ---: | ---: |
|  |  | Form $7 n+1$ |  |  |  |  |  |
|  |  | Form $7 n+2$ | Form $7 n+3$ | Form $7 n+4$ | Form $7 n+5$ | Form $7 n+6$ |  |
| 1 | 10 | $93,732,026,464$ | $93,732,020,308$ | $93,732,005,212$ | $93,732,015,204$ | $93,732,007,554$ | $93,732,013,241$ |
| 2 | 100 | $5,035,939,997$ | $5,035,927,212$ | $5,035,927,620$ | $5,035,915,029$ | $5,035,890,322$ | $5,035,901,175$ |
| 3 | 1,000 | 743,646 | 742,535 | 744,827 | 744,553 | 743,138 | 742,918 |
| 4 | 10,000 | 1 | 2 | 2 | 1 | 1 | 5 |
| 5 | $100,000 \&$ all $10^{n}$ for $n \geq 5$ | 1 | 1 | 1 | 1 | 1 | 1 |

The block-wise deviation of frequency of occurrence of minimum number of primes from corresponding averages is plotted.

Figure 5: Deviation in Frequency of Minimum Number of Primes in Blocks from Average

### 6.3. Maximum Number of Primes in Blocks of 10 Powers

Now all blocks of each 10 power ranging from $10^{1}$ to $10^{1} 2$ are analyzed for the maximum number of primes of various forms $7 n+k$ in each of them.

Table 8: Maximum Number of Primes of form $7 n+k$ in Blocks of 10 Powers

| Sr. No. | Blocks of Size | Maximum Number of Primes in Blocks |  |  |  |  |  |
| :---: | ---: | ---: | ---: | ---: | ---: | ---: | ---: |
|  |  | Form $7 n+1$ | Form $7 n+2$ | Form $7 n+3$ | Form $7 n+4$ | Form $7 n+5$ | Form $7 n+6$ |
| 1 | 10 | 1 | 1 | 1 | 1 | 1 | 1 |
| 2 | 100 | 5 | 5 | 5 | 5 | 5 | 5 |
| 3 | 1,000 | 28 | 27 | 30 | 26 | 29 | 27 |
| 4 | 10,000 | 203 | 203 | 209 | 202 | 211 | 200 |
| 5 | 100,000 | 1,593 | 1,584 | 1,613 | 1,601 | 1,604 | 1,596 |
| 6 | $1,000,000$ | 13,063 | 13,065 | 13,105 | 13,069 | 13,105 | 13,090 |
| 7 | $10,000,000$ | 110,653 | 110,771 | 110,815 | 110,776 | 110,787 | 110,776 |
| 8 | $100,000,000$ | 960,023 | 960,114 | 960,213 | 960,085 | 960,379 | 960,640 |
| 9 | $1,000,000,000$ | $8,474,221$ | $8,474,796$ | $8,475,123$ | $8,474,021$ | $8,474,630$ | $8,474,742$ |
| 10 | $10,000,000,000$ | $75,840,762$ | $75,841,428$ | $75,843,438$ | $75,841,922$ | $75,842,174$ | $75,842,786$ |
| 11 | $100,000,000,000$ | $686,339,040$ | $686,342,043$ | $686,338,138$ | $686,340,737$ | $686,346,250$ | $686,348,604$ |
| 12 | $1,000,000,000,000$ | $6,267,973,536$ | $6,267,979,692$ | $6,267,994,788$ | $6,267,984,796$ | $6,267,992,446$ | $6,267,986,759$ |

Analyzing deviation from average, it is found that the block-wise maximality of primes of form $7 n+1$ has always lagged behind and that of $7 n+5$ has been above the average of all of these.

Figure 6: Deviation in Maximum Number of Primes of form $7 n+k$ in Blocks of 10 Powers from Average

The first 10 power blocks till one trillion with maximum number of primes of these six forms in them are also determined.

Table 9: First Blocks of 10 Powers with Maximum Number of Primes of form $7 n+k$

| Sr. No. | Blocks of Size | First Block with Maximum Number of Primes |  |  |  |  |  |
| :---: | ---: | ---: | ---: | ---: | ---: | ---: | ---: |
|  |  | Form $7 n+1$ | Form $7 n+2$ | Form $7 n+3$ | Form $7 n+4$ | Form $7 n+5$ | Form $7 n+6$ |
| 1 | 10 | 20 | 0 | 0 | 10 | 0 | 10 |
| 2 | 100 | 530,200 | 21,100 | 0 | 100 | 0 | $1,693,600$ |
| 3 | 1,000 | 0 | 0 | 0 | 0 | 0 | 0 |
| 4 | 10,000 | 0 | 0 | 0 | 0 | 0 | 0 |
| 5 | 100,000 | 0 | 0 | 0 | 0 | 0 | 0 |
| 6 | $1,000,000$ | 0 | 0 | 0 | 0 | 0 | 0 |
| 7 | $10,000,000$ | 0 | 0 | 0 | 0 | 0 | 0 |
| 8 | $100,000,000$ | 0 | 0 | 0 | 0 | 0 | 0 |
| 9 | $1,000,000,000$ | 0 | 0 | 0 | 0 | 0 | 0 |
| 10 | $10,000,000,000$ | 0 | 0 | 0 | 0 | 0 | 0 |
| 11 | $100,000,000,000$ | 0 | 0 | 0 | 0 | 0 | 0 |

The last such blocks in our range of one trillion with maximum number of primes of these different forms in them are given ahead.

Table 10: Last Blocks of 10 Powers with Maximum Number of Primes of form $7 n+k$

| Sr. No. | Blocks of Size | Last Block with Maximum Number of Primes |  |  |  |  |  |  |
| :---: | ---: | ---: | ---: | ---: | ---: | ---: | ---: | :---: |
|  |  | Form $7 n+1$ | Form $7 n+2$ | Form $7 n+3$ | Form $7 n+4$ | Form $7 n+5$ | Form $7 n+6$ |  |
| 1 | 10 | $999,999,999,930$ | $999,999,999,950$ | $999,999,999,670$ | $999,999,999,980$ | $999,999,999,890$ | $999,999,999,760$ |  |
| 2 | 100 | $999,993,651,700$ | $999,997,532,200$ | $999,998,422,300$ | $999,977,974,900$ | $999,988,728,100$ | $999,973,496,500$ |  |
| 3 | 1,000 | 0 | 0 | 0 | 0 | 0 | 0 |  |
| 4 | 10,000 | 0 | 0 | 0 | 0 | 0 | 0 |  |
| 5 | 100,000 | 0 | 0 | 0 | 0 | 0 | 0 |  |
| 6 | $1,000,000$ | 0 | 0 | 0 | 0 | 0 | 0 |  |
| 7 | $10,000,000$ | 0 | 0 | 0 | 0 | 0 | 0 |  |
| 8 | $100,000,000$ | 0 | 0 | 0 | 0 | 0 | 0 |  |
| 9 | $1,000,000,000$ | 0 | 0 | 0 | 0 | 0 | 0 |  |
| 10 | $10,000,000,000$ | 0 | 0 | 0 | 0 | 0 | 0 |  |
| 11 | $100,000,000,000$ |  | 0 | 0 | 0 | 0 | 0 |  |

As in general, the prime density has a decreasing trend with increasing range of numbers, it is natural that for larger block sizes, the first as well as the last occurrences of maximum number of primes in them start in the block 0 , which is the very first block.

Figure 7: First \& Last Blocks of 10 Powers with Maximum Number of Primes of form $7 n+k$.

Well-known decrease in the prime density assures that the maximum number of primes cannot occur as frequently, at least for higher ranges.

Table 11: Frequency of Maximum Number of Primes of form $7 n+k$ in Blocks of 10 Powers

| Sr. No. | Blocks of Size | No. of Times Maximum No. of Primes Occurring in Blocks |  |  |  |  |  |
| :---: | ---: | ---: | ---: | ---: | ---: | ---: | ---: |
|  |  | Form $7 n+1$ | Form $7 n+2$ | Form $7 n+3$ | Form $7 n+4$ | Form $7 n+5$ | Form $7 n+6$ |
| 1 | 10 | $6,267,973,536$ | $6,267,979,692$ | $6,267,994,788$ | $6,267,984,796$ | $6,267,992,446$ | $6,267,986,759$ |
| 2 | 100 | 77,946 | 77,531 | 78,016 | 77,890 | 77,366 | 77,557 |
| 3 | $1,000 \&$ all $10^{n}$ for $n \geq 3$ | 1 | 1 | 1 | 1 | 1 | 1 |

Now the block-wise deviation of frequency of occurrence of maximum number of primes from corresponding averages is plotted.

Figure 8: Deviation in Frequency of Maximum Number of Primes in Blocks from Average

## 7. Spacings Between Primes of form $7 n+k$ in Blocks of 10 Powers

### 7.1. Minimum Spacing Between Primes in Blocks of 10 Powers

Omitting prime-free blocks and all blocks of smaller size 10 , the minimum spacing between primes of all forms $7 n+1,7 n+2$, $7 n+3,7 n+4,7 n+5$ and $7 n+6$ in the blocks of increasing power of 10 from 100 onwards are determined to be 14 . This is the first even integral multiple of 7 . Clearly as for larger block sizes, the minimum spacing value cannot increase, it remains same afterwards for all blocks of all higher powers of 10 in all ranges, virtually till infinity!

Figure 9: Minimum Block Spacings between Primes of form $7 n+k$

Except the block-size of 10 , the first and the last primes in the 10 power blocks with minimum block spacings are as follows.

Table 12: First Starters of Minimum Block Spacings between Primes of form $7 n+k$ in Blocks of $10^{n}$

| Sr. No. | Blocks of Size | First Prime with Respective Minimum Block Spacing |  |  |  |  |  |
| :---: | ---: | ---: | ---: | ---: | ---: | ---: | ---: |
|  |  | Form $7 n+1$ | Form $7 n+2$ | Form $7 n+3$ | Form $7 n+4$ | Form $7 n+5$ | Form $7 n+6$ |
| 1 |  | Not Found | Not Found | Not Found | Not Found | Not Found | Not Found |
| 2 | $100 \&$ all $10^{n}$ for $n \geq 2$ | 29 | 23 | 3 | 53 | 53 |  |

Withing specific limit like that of ours of 1 trillion, the last primes in the 10 power blocks with minimum block spacings are also more or less uniform.

Table 13: Last Starters of Minimum Block Spacings between Primes of form $7 n+k$ in Blocks of $10^{n}$

| Sr. No. | Blocks of Size | Last Prime with Respective Minimum Block Spacing |  |  |  |  |  |
| :---: | ---: | ---: | ---: | ---: | ---: | ---: | ---: |
|  |  | Form $7 n+1$ | Form $7 n+2$ | Form $7 n+3$ | Form $7 n+4$ | Form $7 n+5$ | Form $7 n+6$ |
| 1 | 10 | Not Found | Not Found | Not Found | Not Found | Not Found | Not Found |
| 2 | 100 | $999,999,993,749$ | $999,999,994,457$ | $999,999,998,567$ | $999,999,999,863$ | $999,999,998,513$ | $999,999,995,483$ |
| 3 | $1,000 \&$ all $10^{n}$ for $n \geq 3$ | $999,999,993,749$ | $999,999,999,287$ | $999,999,998,567$ | $999,999,999,863$ | $999,999,998,513$ | $999,999,996,197$ |

Figure 10: First \& Last Starters of Minimum Block Spacings between Primes of form $7 n+k$ in Blocks of $10^{n}$

The number of times this minimum block spacing occurs between primes of all forms $7 n+1,7 n+2,7 n+3,7 n+4,7 n+5$ and $7 n+6$ is noteworthy.

Table 14: Frequency of Minimum Block Spacings between Primes of form $7 n+k$

| Sr. No. | Blocks of Size | Number of Minimum Block Spacings Occurring for Primes |  |  |  |  |  |
| :---: | ---: | ---: | ---: | ---: | ---: | ---: | ---: |
|  |  | Form $7 n+1$ | Form $7 n+2$ | Form $7 n+3$ | Form $7 n+4$ | Form $7 n+5$ | Form $7 n+6$ |
| 1 | 10 | 0 | 0 | 0 | 0 | 0 | 0 |
| 2 | 100 | $311,770,604$ | $311,758,174$ | $311,752,528$ | $311,745,077$ | $311,747,223$ | $311,754,644$ |
| 3 | 1,000 | $367,877,711$ | $367,864,098$ | $367,868,966$ | $367,867,484$ | $367,869,338$ | $367,862,706$ |
| 4 | 10,000 | $373,488,315$ | $373,474,760$ | $373,481,415$ | $373,479,744$ | $373,478,126$ | $373,474,324$ |
| 5 | 100,000 | $374,049,446$ | $374,035,656$ | $374,043,124$ | $374,039,376$ | $374,038,041$ | $374,035,184$ |

| 7 | $10,000,000$ | $374,111,200$ | $374,097,095$ | $374,104,803$ | $374,101,058$ | $374,099,619$ | $374,097,291$ |
| 8 | $100,000,000$ | $374,111,746$ | $374,097,669$ | $374,105,359$ | $374,101,621$ | $374,100,173$ | $374,097,869$ |
| 9 | $1,000,000,000$ | $374,111,789$ | $374,097,735$ | $374,105,414$ | $374,101,672$ | $374,100,238$ | $374,097,920$ |
| 10 | $10,000,000,000$ | $374,111,795$ | $374,097,735$ | $374,105,423$ | $374,101,679$ | $374,100,249$ | $374,097,926$ |
| 11 | $100,000,000,000$ | $374,111,796$ | $374,097,735$ | $374,105,423$ | $374,101,680$ | $374,100,252$ | $374,097,926$ |
| 12 | $1,000,000,000,000$ | $374,111,796$ | $374,097,735$ | $374,105,423$ | $374,101,680$ | $374,100,252$ | $374,097,926$ |

We see increase in the occurrence of minimum spacings for prime numbers of all forms. The cause of this is that as we increase block size, some primes with desired spacing coming at the crossing of smaller sized blocks find themselves inside larger blocks, which raises their count. Then this rate of increase gradually decreases owing to fading prime frequency.

Figure 11: \% Increase in Occurrences of Minimum Block Spacings between Primes of form $7 n+k$ in Blocks of $10^{n}$

### 7.2. Maximum Spacing Between Primes in Blocks of 10 Powers

Unlike the minimum spacing between primes in blocks of 10 powers, the maximum spacing in them shows a little increasing trend with increase in the block size.

Table 15: Maximum Block Spacing between Primes of form $7 n+k$

| Sr. No. | Blocks of Size | Maximum Spacing Between Primes |  |  |  |  |  |
| :---: | ---: | ---: | ---: | ---: | ---: | ---: | ---: |
|  |  | Form $7 n+1$ | Form $7 n+2$ | Form $7 n+3$ | Form $7 n+4$ | Form $7 n+5$ | Form $7 n+6$ |
| 1 | 10 | Not Found | Not Found | Not Found | Not Found | Not Found | Not Found |
| 2 | 100 | 98 | 98 | 98 | 98 | 98 | 98 |
| 3 | 1,000 | 994 | 994 | 994 | 994 | 994 | 994 |
| 4 | 10,000 | 3,318 | 3,038 | 3,066 | 3,122 | 3,108 | 3,024 |
| 5 | $100,000 \&$ all $10^{n}$ for $n \geq 5$ | 3,318 | 3,038 | 3,066 | 3,122 | 3,108 | 3,150 |

Till our ceiling of $10^{1} 2$, a trend of increase and settling is observed as shown in the figure.

Figure 12: Deviation of Maximum Block Spacings between Primes of form $7 n+k$ from Average

The first \& the last prime numbers of forms $7 n+k$ with these maximum block spacings within different blocks are as follows.

Table 16: First Starters of Maximum Block Spacings between Primes of form $7 n+k$ in Blocks of $10^{n}$

| Sr. No. | Blocks of Size | First Prime with Respective Maximum Block Spacing |  |  |  |  |  |

## 8. Units Place and Tens Place Digits in Primes of form $7 n+k$

Only 6 different digits are possible in units place of primes. The number of primes of form $7 n+k$ with these different digits in units have been determined till 1 trillion. So ignoring these special cases $2 \& 3$, deviations from average are also drawn.

Table 19: Number of primes of form $7 n+k$ with different units place digits till one trillion

| Sr. No. | Digit in Units Place | Number of Primes of form |  |  |  |  |  |
| :---: | :---: | ---: | :---: | :---: | ---: | ---: | ---: |
|  |  | $7 n+1$ | $7 n+2$ | $7 n+3$ | $7 n+4$ | $7 n+5$ | $7 n+6$ |
| 1 | 1 | $1,566,997,409$ | $1,566,981,018$ | $1,567,001,317$ | $1,566,998,104$ | $1,566,990,811$ | $1,566,992,321$ |
| 2 | 2 | 0 | 1 | 0 | 0 | 0 | 0 |
| 3 | 3 | $1,567,001,995$ | $1,567,007,149$ | $1,566,990,378$ | $1,566,987,259$ | $1,566,998,652$ | $1,566,994,472$ |
| 4 | 0 | 0 | 0 | 0 | 0 | 1 | 0 |

| 35 | 81 | 156,692,984 | 156,694,139 | 156,704,605 | 156,693,689 | 156,696,291 | 156,698,295 |
| 36 | 83 | 156,702,438 | 156,698,757 | 156,703,759 | 156,691,391 | 156,697,499 | 156,698,056 |
| 37 | 87 | 156,697,472 | 156,696,545 | 156,703,998 | 156,701,087 | 156,698,907 | 156,701,045 |
| 38 | 89 | 156,694,476 | 156,697,752 | 156,698,944 | 156,700,117 | 156,700,555 | 156,710,164 |
| 39 | 91 | 156,699,720 | 156,699,845 | 156,700,427 | 156,702,174 | 156,685,459 | 156,704,265 |
| 40 | 93 | 156,699,336 | 156,698,842 | 156,700,869 | 156,708,468 | 156,692,159 | 156,700,344 |
| 41 | 97 | 156,701,986 | 156,706,631 | 156,695,606 | 156,708,035 | 156,698,651 | 156,699,273 |
| 42 | 99 | 156,697,917 | 156,705,475 | 156,690,277 | 156,704,330 | 156,701,865 | 156,695,296 |

Out of these 42 cases, the cases of 02 and 05 are exceptional as they occur only once. So, while studying averages, these special cases are always to be kept aside having odd man out roles.

Following deviation from average is seen for occurrences of other last two digits in range of $1-10^{12}$ for primes of form $7 n+k$.

Figure 16: Deviation of Last 2 Digits of Primes of form $7 n+k$ from Inter se Average

## 9. Analysis of Successive Primes of form $7 n+k$

When two successive primes are of same form $7 n+k$, the case becomes interesting. Their analysis is graphically presented.

Figure 17: Number of Successive Primes of form $7 n+k$ till $10^{1} 2$

Figure 18: Successive Occurrence of Primes of form $7 n+k$ till $10^{1} 2$

Since long consistent efforts are been taken to study random distribution of primes. This work is an addition to that with respect to a specific linear pattern of $7 n+k$. The availability of more and more rigorous analysis like this will help give a deeper insight into understanding of prime distribution.

## Acknowledgements

The author has extensively used the Java Programming Language, NetBeans IDE, for implementing the algorithms developed during this work. Thanks are due to their Development Teams including the that of Microsoft Office Excel, which was used as validation and visualization tool, in addition to usual plotting of graphs.

The continuous use of the Computer Laboratory of Mathematics \& Statistics Department of the author's institution has a great credit in materializing the analysis aimed at. The power support extended by the Department of Electronics of the institute is also being acknowledged.

The author is thankful to the University Grants Commission (U.G.C.), New Delhi of the Government of India for funding this research work under a Research Project (F.No. 47-748/13(WRO)).
